Research Interest

My ultimate research goal is to enable intelligent systems to **perceive**, **reason**, and **predict** in complex visual environments, bridging video understanding and controllable generation. My current research interests lie in:

- **Controllable Video Generation:** Developing controllable text/image-to-video frameworks, with interests in test-time optimization and compositional generation.
- **Generative World Modeling:** Scaling generative models to follow interactive instructions and integrate structured human knowledge for better prediction.
- **Video Understanding & Reasoning:** Leveraging foundations in action recognition and temporal grounding to interpret long-range event dynamics.
